

# Sloped Flush Mount Spacer Kit Instructions

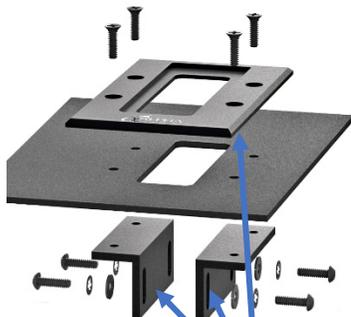

DSTR-AOA-9095K Rev B

To accommodate the wide variety of aircraft, instrument panels, windshield slopes and mounting locations, Alpha Systems designed a mounting kit that replaces the standard plate and below dash angle brackets.

This kit allows for the slope or curve of most aircraft BUT can be sanded to further accommodate more or less of a curve.

**WE STILL RECOMMEND THAT THE DISPLAY BE MOUNTED DIRECTLY CENTERED IN FRONT OF THE PILOT.**

Remove these brackets and mounting plate

This kit is universal and can be used for BOTH Pilot and Co-Pilot AOA display kits by rotating the wide side of the spacer towards the slope of the glare shield.

Replace and install with sloped mounting brackets, once nuts are tightened, cut off excess screw length
