**INSTRUCTIONS FOR SELECTING RIVET SETS**

To develop maximum power, the riveter must drive the rivet near the end of the riveter’s stroke. For maximum power the combined length of the two rivet sets must be of the correct length. Determine the correct length as follows:

**WHEN TWO CUPPED RIVET SETS ARE USED** – The sum of the two rivet sets “L” dimension should equal the closed height dimension of the yoke minus the total thickness of the material being used.

**WHEN TWO FLUSH SETS ARE USED** – The sum of the two rivet sets “L” dimension should equal the closed height dimension of the yoke minus the overall length of the rivet after it is driven.

**WHEN ONE CUPPED SET & ONE FLUSH SET ARE USED** – The sum of the two rivet sets “L” dimension should equal the closed height dimension of the yoke minus the total thickness of the material being riveted and the height of the finished rivet head driven by the flush set. If necessary, select rivet sets a little short and shim to proper length with hardened shims listed in the table. The closed height dimension of the yoke referred to above is the opening available when jaws of plunger are in extreme closest or forward position with both rivet sets in place.

NUMATX HTS-C3K HYDRAULIC RIVET SQUEEZER

The Numatx HTS-C3K C-Squeezer System is a hydraulically operated hand held tool, designed to squeeze up to 1/8” diameter aircraft grade rivets (AD alloy). This unit is hydropneumatic operated (also known as pneumatic). The system is comprised of an HTC-3 hand-held C-Squeezer unit and an HT-10 Pressure Lubricator. The fully hydraulic C-Squeezer offers the advantages of decreased weight, smaller size, and constant force when compared to traditional pneumatic only squeezers. This reduces operator fatigue, allows for use in more confined areas, and improves control of the squeezing action (feathering operation). The units are built from high-quality aircraft grade materials, with parts made on CNC machining centers and features held to close tolerances, for years of dependable operation.

RIVET HAMMERS

These high quality riveting hammers are excellent for all light aircraft metal riveting applications. They feature a convenient offset handle (except Model US3AA which is straight handle) and come complete with retainer spring and regulator. All models feature metered teasing trigger, made in U.S.A.

RIVETING HAMMERS

In the early stages of developing a truly recoilless/fatigueless riveting hammer, it was determined that the tools must meet certain goals. The main goal being a reduction in low-frequency vibration in accordance with ISO Standard #5349-1986. In this standard are guidelines for the measurement and assessment of human exposure to hand-transmitted vibration. As a result, the following has been achieved: • Ergonomic design: To maximize user comfort by achieving a relaxing, comfortable, lightweight and balanced tool • Compact tool size: Since aircraft riveting is never standard, a tool that will allow the best overall access • Retain user touch: A metered trigger which provides single or multiple blows per minute while maintaining the ability to set rivets in seconds • Further dampen noise output. • Least amount of parts: No similar tool is produced with fewer parts, thus enhancing reliability, but keeping it simple enough so that maintenance can be done by anyone.

Independent testing has shown these tools will greatly lessen job-related effects of prolonged exposure to vibration & boost user productivity.

**"Center It" Hole Drilling Jig**

"Center It" is a jig used to drill holes in pipe or tube stock. To use the Center It, simply place it on your drill press table, run the bit down (with the motor off) to hold the centered jig on the bit, then bolt the jig to the press table. No clamping of the tube is necessary; the angled flats of the jig hold it in a centered position. Your holes are automatically centered on the tube with no center-punching necessary. If the tube is too fat to drill in a single operation, simply turn it over. The device is useful to kitplane builders who have to drill several holes in a single tube or many tubes because no clamping or center-punching of the tube is required. It also makes short work of drilling. P/N 12-20815 $13.85

BAILEIGH METAL TOOLS

BAILEIGH MANUAL TUBE BENDER RDB-10

This bending machine can be fitted with hundreds of round and square tubing die sets as well as round pipe dies sets with a maximum center line radius up to 7”. This manual tube bender uses a large diameter indexing plate that allows the bender to bend to 206 degrees (180 degrees plus spring back) in one shot without having to re-index and re-pin common on most other manual pipe benders on the market. Each pull of the handle bends the material approximately 8 degrees. When bending requirements are for lighter gauge materials this tube bender machines indexing unit can be shut off and the handle can be put into a manual override housing that allows the operator to simply walk around the machine and bend without the pound of the handle. It includes the stand, degree dial, and handle. (P/N 13-08974) $3,270.25

TIGHT-FIT DRILL KIT

Space, every inch of it, is at a premium in aircraft design as shape and weight is critical to function. Also, airplanes are riveted together which requires thousands of holes to be drilled in difficult locations without scratching or marring the work surface. So, engineers needed to design a versatile “chuck-less” drill attachment that could reach into very confined areas. The answer was found in putting threads on the shanks of drill bits. The benefits are significant. Threaded drill bits eliminate the need for a chucking mechanism. Freed of this restriction, it is possible to do a wide variety of jobs in places with extreme space limitations (less than 1” x 2”). Chuck slippage is all but eliminated while the precision mating angle between threaded drill and drive spindle insures concentricity. Drill bit change times are reduced, an exact working drill bit length is insured and the chance of marring or scratching the work surface is greatly reduced. The Model 00105 Kit includes: a versatile close-quarter Right Angle Drill Attachment capable of drilling up to 1/4” diameter holes and compatible with all standard power drills, a 6” Threaded Extension for those deep hard-to-reach spots, a Chucking Spud which allows direct use of threaded TighTight® drill bits and extensions with your standard drill motor, five aircraft quality threaded TighTight® drill bits (Short Drill Bit Set, 00133), a TighTight® 3-Way Wrench, and is packaged in a red, heavy-duty, blow-molded storage case. Features: Attaches to any power drill; provides utility of extension drill bit set. This is a companion tool to the ARC-360 lightening hole cutter. The Flanger-360 will form a 30 degree flange on 2024-T3 aircraft aluminum up to .032” thick and in diameters from 2 to 6 inches. Its polished hardened steel rollers gently and effortlessly form the flange as the operator rotates the tool around the lightening hole. Unlike other flanging tools that rely on the skill and eye of the operator, the Flanger-360 stays in constant position with the lightening hole via guide rollers as it progressively forms the flange.

ECONOMY PORTABLE SAND BLASTING SYSTEM

A new portable blasting system for cleaning and surface preparation of metal, plastic, fiberglass or wood. Ideal for graffiti removal from brick or stone surfaces. Dee-Blust system consists of an abrasive hopper 20-1/2" high and 9-1/2" diameter molded PVC drum with tight fitting top to keep abrasive media clean. Hopper holds up to 65 lbs. of media. It has a 10 ft. long rubber hose, a full-length face shield and a trigger-operated blasting gun that completely mixes air and media to produce a uniform spray pattern. P/N 12-00072 $284.95

PORT-A-BLAST SANDBLASTER

The Port-A-Blast sand blast gun is a complete sand blast unit. Fill the container with the abrasive material, connect the gun to your air line and it is ready to go to work. Will operate on air pressure as low as 60 PSI. However, for best results, pressures of 100-500 PSI are recommended. The greater the pressure the faster the cutting. The gun can be used to siphon abrasives or liquids directly from a hopper or bucket, using a flexible siphon tube, and eliminating the 1 gal. container. Compatible Abrasives: - Silica Sand - the cheapest and most widely used for average work - Glass Beads - Black Beauty Abrasive - Aluminum Oxide Abrasives - for fast cutting and fine texturing and etching - Nut Shell Abrasives - for cleaning and polishing hard under surfaces without scratching - Metal Shot - for removal of hard surfaces such as porcelain. Port-A-Blast gun P/N 12-00172 $92.80 Flexible siphon tube P/N 12-00173 $11.75 Replacement Ceramic nozzle P/N 12-00493 $20.50

DELUXE PORTABLE PRESSURE BLAST SYSTEMS

These Portable Pressure Blasters are designed to make the most efficient use of your air and abrasive supply. These are not inexpensive siphon units. The entire tank is filled with air and sand under pressure. When the nozzle and valve is opened the sand/air mixture is released under tremendous pressure to quickly remove paint, rust, scale and other coatings. These units are 3-5 times faster to use than siphon units. All units arrive complete with air gauge, pressure vessel, sandblast gun, and sandblast hose. Simply fill with abrasive and attach to your air supply and you are ready to begin blasting. Order by Part no.

SCALES 4 PLANES

2,000 lb scale measures 11-3/4” x 15-1/4” and is made of cast aluminum. The electronic display has been recessed into the top to keep it out of harms way. Your tire will be positioned parallel to the display to allow the readout to be clearly seen on the outboard side of the tire, or wheel pants. The scale top is powder coated gray. The coating makes cleanup quite easy because most everything will wipe right off. The unit is capable of weighing surface for the tire. By eliminating the need for Keys on the scale platform, the unit is even less capable of damage than before. The Aircraft tire should be unable to penetrate deep enough to ever touch the LCD display, but avoid the possibility because it would break the glass if it ever did.
